EXPERIENCE

Philips

Software Development Engineer, Ambulatory Monitoring and Diagnostics

June 2022 - Present

- Develop remote patient monitoring systems to receive measurements from internet-connected medical devices and provide alerts and analytics to healthcare providers and patients
- Modernize projects and encourage best practices by developing CI pipelines, integrating static analysis tools, and undertaking major framework upgrades and migrations
- Build REST APIs and data pipelines to receive, transform, store, and publish health metrics
- Design and implement web pages to streamline and standardize administrative workflows
- Identify and remediate security vulnerabilities in source code, infrastructure, and dependencies
- Devise, socialize, and implement architectural transformations to simplify systems, enable new features, and improve system resilience
- Utilize Java, Spring Boot, AWS, MySQL, SQL Server, TypeScript, Angular, and critical thought to improve patients' lives

McKesson

Sr. Associate Software Engineer, McKesson Pharmacy Systems

January 2019 - June 2022

- Developed a SaaS pharmacy management system, implementing features such as COVID-19 vaccine reporting, controlled substance monitoring, electronic prescribing, authentication flows, and electronic payments
- Identified a critical requirements gap that would have led to rejection of health insurance claims
- Led tech workshops and code katas to develop colleagues' skills, as well as feature demos for top customers
- Utilized Java, Java EE, Spring Boot, Oracle SQL, Kafka, and Swing for client- and server-side development

UPMC

Summer Associate, UPMC Health Plan Consumer Technology

June 2018 - August 2018

- Utilized Angular and NativeScript to develop a rewrite of the UPMC Health Plan's cross-platform mobile application
- Developed features to help users search for in-network care, view and send insurance cards, and understand downtime
- Designed and built a desktop application using C# and SQL Server to help employees correct common data issues

Carnegie Mellon University

Summer Research Intern, Human-Computer Interaction Institute

May 2017 - October 2017

- Designed and developed an online learning community using Python, Django, Postgres, HTML/CSS, JavaScript, and JQuery
- Developed video chat functionality for group work, developed automated email reminder notifications, redesigned event signup flow based on usability testing, developed site customization settings to suit different instructors' needs
- Provisioned and maintained Heroku cloud infrastructure

EDUCATION

University of Pittsburgh, Pittsburgh, PA

B.S., Computer Science

SKILLS

Core skills	Web applications, REST APIs, relational databases, object-oriented programming, system integration, Agile, automated testing, continuous integration
Languages	Java, Python, SQL, TypeScript, JavaScript
Tools	Spring Boot, Angular, AWS, GCP, Linux, Windows, Git, GitHub Actions, Azure DevOps
